PROFESSIONAL SUMMARY

AI/ML Engineer with hands-on production experience building RAG pipelines, multi-agent LLM systems, and computer vision solutions. Proficient in Python, PyTorch, and the modern LLM stack (LangChain, LangGraph, MCP). Passionate about turning research-grade AI into reliable, low-latency production systems.

TECHNICAL SKILLS

Languages: Python, Java, SQL

Frameworks & Tools: PyTorch, TensorFlow, Docker, Milvus, Faiss, LangChain, Langgraph, Firebase, Git, MySQL, OpenCV

ML / AI: RAG, LLMs (Grok, Ollama, Hugging Face), Deep Learning, NLP, Transformers, Langchain, Langgraph, LLM Integration, MCP Integration, Agentic AI

EDUCATION

B.E. in Information Science & Engineering — M S Ramaiah Institute of Technology, Bangalore 2021 – 2025

EXPERIENCE

Valiance Solutions | Data Scientist | May 2025 – Present

- Built an end-to-end Retrieval-Augmented Generation (RAG) system for domain-specific question answering using Google Gemini and open-source LLMs, with Milvus as the vector database.
- Developed a document processing pipeline covering data ingestion, text chunking, and embedding generation to enable efficient semantic search over large corpora.
- Integrated a BGE reranker post-retrieval to re-score candidate chunks, improving retrieval relevance and measurably enhancing answer quality.
- Designed and iteratively optimized prompt templates to reduce hallucinations, enforce output structure, and improve factual accuracy of generated responses.
- Implemented a real-time query pipeline that retrieves the most relevant context and streams responses with low latency, supporting production-grade throughput.

PROJECTS

Multi-Agent Financial Research System *Python · LangGraph · MCP · Streamlit · Gemini · Financial APIs*

- Engineered a 4-agent LangGraph system covering stock analysis, news retrieval, sentiment scoring, and risk assessment, delivering end-to-end investment research autonomously.
- Designed planner-driven workflows with shared state management, enabling agents to coordinate across tasks without manual intervention.
- Integrated MCP-based tool orchestration for real-time financial data retrieval and chart generation, making the system extensible to new data sources.
- Streamlit dashboard serving real-time AI-powered financial insights and auto-generated investment reports.

AI YouTube Blog Generator *Python · LangGraph · Gemini · Streamlit*

- Extracted and cleaned YouTube transcripts via the YouTube Transcript API, feeding them into a LangGraph planning agent that outlines and streams a structured, publish-ready blog post in real time.
- Scraped official documentation for technologies detected in the video using web crawling, and surfaced relevant reference links alongside the blog so users can explore topics in depth.
- Enabled a Question and Answering interface over video content using LangGraph tool-calling agents, with persistent storage for all generated blogs.
- Orchestrated the full workflow — transcript extraction, planning, blog generation, doc scraping, and Q&A — as a multi-step LangGraph pipeline with reliable state management
